Severe Weather

_____ are a kind of severe weather that occurs in all climates.

They build where warm fronts of low _____ and cold fronts of high pressure are forced together.

Thunderstorms are the most _____ storms.

They create thunder and _____.

A warm front rises through a cold front and makes a tall cloud.

Warm air and cool air _____ together inside the cloud and create static _____.

Suddenly, electricity shoots out of the cloud as a bolt of lightning.

It is so powerful that it makes a loud crash of thunder.

Sometimes, a severe thunderstorm causes _____.

They start when a sudden drop in air pressure creates a vortex.

Tornadoes can form whenever a warm front meets a cold front.

But so many tornadoes touch down in the Midwest which is called Tornado Alley.

Hurricanes are the strongest and most dangerous storms.

They are caused by a warm low pressure system that evaporates water from oceans.

In the United States, hurricanes are given names, and they vary in _____ from category one to five.

The strongest hurricane on record in the United States was Camile.

She was a category 5 storm that blew winds over 300 km/h and destroyed entire cities along the Gulf of Mexico.

Four Seasons

From sunny summer to frosty winter, we have four seasons.

Earth's orbit and tilt on its _____ make four different levels of sun energy, creating four seasons.

When Earth's axis _____ the _____ of the sun, it cannot receive many _____.

That is why winter is the coldest of the four seasons.

Snow covers the ground, and temperatures fall _____ zero.

However, children can build snowmen or skate on the ice.

As Earth moves closer to the sun, it receives more sunrays.

Thus, the days get longer and warmer.

The birds start chirping⁶ in spring as nature wakes up from winter's sleep.

Green leaves grow in the trees and fields while happy children ride bicycles.

Soon, summer comes with hot and humid weather.

The reason is that Earth's axis is facing the sun.

Of all four seasons, Earth receives the most sunrays in summer.

Sunflowers reach for the sun and families visit seaside beaches to _____.

As Earth keeps moving, autumn turns summer's green to many _____ of orange, yellow, and brown.

Summer is now over, and leaves fall to the ground.

Farmers harvest their crops, and the markets are filled with food.

Everyone is now ready for winter.

Rainforests of the Sea

Coral reefs are the rainforests under the sea.

They provide _____ views of tropical fish and _____.

They are the homes of a large number of sea creatures.

Many people think coral reefs are sea plants or even rocks.

However, coral reefs are formed from millions of tiny animals that are called coral polyps.

Coral polyps live together in groups.

They produce a substance that turns into hard _____.

The hard skeletons fill up the reefs over time.

Corals can grow in _____ tropical water where the sunrays reach them.

The reason is that corals depend on algae for their nutrients.

Corals get their nutrients from the _____ of algae's photosynthesis, in which sunlight is _____.

Coral reefs are one of the precious parts of our _____.

They provide food and shelter for thousands of ocean plants and animals.

It is believed that a quarter of all the ocean's animals live with coral.

Coral reefs also provide good _____ for the tiny fish and shrimp known as the cleaners of the sea.

These tiny creatures clean the sea by eating parasites on larger fish.

Today, coral reefs are endangered because of pollution and fishing.

We should think of some ways to preserve them for both sea creatures and humans.

What Flowers do

Flowers are used to _____ events and to make things beautiful.

Some flowers are even eaten as _____ or drunk as tea.

But the most important thing that flowers do is to produce seeds that become new plants.

To make fruits, each plant needs to be pollinated.

But most flowers cannot _____ themselves.

Insects help them. Flowers attract insects with their beautiful _____ and the smell of sweet nectar.

Insects land on flowers to drink this sweet _____.

When they land on flowers, pollen sticks to their bodies.

Pollen is a powder found on flowers.

When insects fly from flower to flower, they _____ the pollen.

The pollen from different flowers mixes together and fertilizes them.

After a flower is pollinated, new seeds form in its _____.

And these seeds will become new plants when farmers plant them in the ground.

Some of them can easily become new plants after the wind blows and spreads them around.

By the time the seeds begin to form, the flower dies, but its ovary develops into a fruit, nut, or grain.

Some are _____ fruits such as apples.

Others are hard, dry nuts or grains of wheat.

Butterflies and Moths

Butterflies and moths look very similar.

They get _____ in the same way.

They drink juice from flowers and fruits called _____ and water from the ground.

But how can you tell the differences between moths and butterflies?

Both moths and butterflies start as little eggs and grow into _____.

Caterpillars have long, soft bodies with short legs.

Some caterpillars have hair or _____.

Most caterpillars are green or brown, and their colors help them hide from other animals.

This is called _____.

Caterpillars mostly eat leaves.

Later, a caterpillar makes a hard _____ around its body.

Inside the shell, the caterpillar changes into a butterfly or moth.

This change is called metamorphosis.

During metamorphosis, the caterpillar _____ wings and changes its body.

Then, a butterfly or moth breaks the shell and comes out.

Butterflies' wings are usually colorful in order to _____ other butterflies.

The bottoms of their wings are camouflage colors.

Moths are usually brown, gray, or white.

Butterflies like to fly during the day.

Moths like to fly at night.

Moths use the moonlight to help them fly.

Stars and Planets

We can see many gleaming _____ at the night sky.

They are stars and planets.

A star is a huge ball of burning gas which makes energy called light.

Most stars look like bright dots because they are so far away.

The very hot stars are blue, the ones with _____ heat are yellow, and the coolest stars are red.

The brightness of a star depends on how much light it produces.

The hotter a star is, the brighter it _____.

The closer a star is to Earth, the brighter it _____ to us.

The sun is one of billions of stars in the _____.

The color of the sun is yellow.

This means the sun is only medium hot for a star.

However, the temperature at its _____ is more than 13 million degrees Celsius.

The sun is a small star _____ to the other stars in the universe.

But it is much bigger than Earth.

Planets are also _____ in space.

A planet is a large object that moves around a star.

Different from a star, a planet gives off no light of its own.

It shines only because of light reflected from the sun.

Earth is one of the planets that move around the sun.

Volcanoes

Have you ever wondered how volcanoes are made?

Volcanoes erupt when molten rock comes out from the Earth's mantle.

When molten rock comes out, it is called lava.

Every time _____ comes out and _____, the volcano becomes bigger.

Over thousands of years, the hard lava makes mountains.

The deep inner part of the Earth is moving.

The area under the surface of the Earth is filled with molten rock called magma.

When parts of the Earth move, they make pressure, which _____ magma up through the Earth's crust.

This is the lava we see when a volcano erupts.

Lava is extremely hot. Its temperature can be from 700°C to 1,200°C.

An _____ volcano shows signs that it may _____ soon.

Lava and gas may come out, or there could be _____ near the volcano.

The Ring of Fire is a very large circle of volcanoes.

It runs from Japan up through Alaska and Canada and down to California.

It often causes earthquakes.

They are very dangerous for many people.

But sometimes the heat from volcanoes makes energy that people use to live.

And lava and _____ from volcanoes turn into rich _____ that can grow food and forests.

Sound

What do a guitar, a human voice, and _____ have in common?

They are all sounds. And sounds are all created by vibrations in matter.

A vibration happens when energy makes the atoms in matter _____.

The shaking causes waves.

Sound waves can move through any kind of matter, including air, water, and even _____ rock.

But when there is no matter, there is no sound.

An area without matter is called a _____.

Outer space is a vacuum because there is no air.

This is why _____ use wireless technology to talk to each other in outer space.

We can hear sounds by using our ears.

We can hear because of a thin drum that vibrates when a sound wave _____ our ears.

Some sounds are very fast, high-pitched waves while other sounds are slow, low-pitched waves.

Sound waves create music, _____, and all of the noises we can hear.

Sound travels 1,230km/h at a really fast speed.

But some things go faster than sound.

Fighter jets can break the sound _____ by going faster than 1,230km/h.

This creates loud sonic booms.

A bolt of lightning is also faster than sound.

That is why we see lightning before we hear the sonic boom caused by thunder.

Rocky Mountains

Rocky Mountains are the longest mountain _____ in North America.

They begin in Canada and _____ all the way down to Mexico.

They stretch for 3,000 miles (4,800 kilometers).

They run through five states.

They are Montana, Idaho, Wyoming, Utah, and Colorado.

The Rocky Mountains are made up of rugged mountain ranges with deep _____.

These _____ make them a good home for many different animals and plants.

Black bears, grizzly bears, mountain lions, and wolverines live in the Rocky Mountains.

Geese, eagles, owls, and turkeys spend winters in the mountains.

_____ grasses and wildflowers grow in the valleys.

Along the lower mountains are evergreen trees such as aspens and yellow pines.

The Rocky Mountains also provide many natural resources for Americans.

Various metals and minerals are found in the rocks of the mountains.

The most _____ metal found in the Rocky Mountains is copper.

Copper is used in products like electrical _____, computers, pots, and pans.

Natural gas is also an important _____ that comes from the Rocky Mountains.

It is an important source of energy.

The Rocky Mountains have various animals, plants, and natural resources.

So, much of the land in the Rocky Mountains is protected in national parks.

Recycling: A Way to Save

People need natural resources to live.

However, our natural resources are quickly disappearing.

If we _____ using oil so quickly, some scientists say we will not have enough for everyone by 2020.

What is a _____ way to use natural resources?

Recycling can be an answer.

Recycling means to reuse materials by changing them into new products.

It also _____ the amount of _____ going into landfills.

Recycling saves energy.

It takes less energy to recycle materials than to produce new items.

Saving energy means that we cause less air _____, acid rain, and greenhouse gases.

_____, many communities around the world are trying to recycle.

It is easy to do.

First, find out which materials can be recycled.

Paper, glass, and plastic are the most common.

Then, place the different materials in _____ containers.

Put them out for collection or take them to a recycling center.

It is also important to buy recycled products or those that can be recycled.

By buying recycled products, we can help to save energy and natural resources at the same time.

No one would want the world with dirty air, polluted water and dry and _____ soil.

You can make a difference.

It is never too late to take action.

Get started now!

Unit 19. Using Estimation Strategies

미국교과서
READING
ADVANCED 2

Date : _____ . _____ . _____

다음을 잘 듣고, 빈칸에 알맞은 단어를 써보세요.

Using Estimation Strategies

You may read an article about twelve thousand _____ that visited the Everglades in Florida.

Or you may hear the news that millions of comma butterflies moved north of Edinburgh.

In these _____, how can the _____ or scientist figure out their numbers?

It is almost impossible to count the birds or butterflies in a large population.

Scientists and reporters can figure out numbers by using estimation strategies.

An estimation is an _____ calculation of a quantity or value.

It _____ using clues to make a sensible guess or estimate.

For example, suppose you need to count the _____ that are in a large jar.

You can use a lesser number or an amount of something as a _____ to estimate a greater number or amount.

In this case, take out five beads from the jar first.

Next, guess how many times you need to grab five beads to empty the jar.

Then, you can figure out the number of beads without counting them one by one.

This is the same way that scientists and reporters _____ the number of birds in a large population in an area.

They choose a benchmark number of birds in a small area.

Then, they figure out the approximate number of all the birds in the entire area.

They Travel in Fives

The animals living in Alaska wanted to go to see the Northern Lights.

"There are only thirty seats left," said Leader Polar Bear.

"Then, half should be for us penguins, and the rest can be for the polar bears,"
said Leader Penguin in a _____ voice.

The polar bears and penguins needed to take the floating pieces of ice to get a
closer look.

But how could they count to thirty?

All the animals looked at each other in confusion.

"Okay, all the polar bears get on the ice," _____ Leader Polar Bear.

The polar bears stepped onto the ice.

Some fell into the water and did not know what to do.

No one knew how many polar bears or penguins could _____ on one
piece of ice.

And, sadly, no one knew how to count to thirty.

Then, a young polar bear _____ the leaders and said, "If five animals
ride on one piece of ice, it will be easier to count."

"Five!" _____ an angry penguin.

"If five animals are on one piece, six pieces of ice will _____ thirty," the young polar bear responded.

The animals gathered six pieces of ice.

It was easy to see how they should share the six pieces of ice.

To make the numbers even between the polar bears and the penguins, three pieces were for the polar bears, and three were for the penguins.

"One, two, three, four, five," the animals _____ in one voice.

Six pieces of ice—five animals on each piece of ice— made a _____ of thirty animals that sailed to see the light show.
